

## SWR LaseMD Pre/Post Care

PRIOR TO YOUR APPOINTMENT YOU MUST HAVE **TOPICAL ANESTHETIC** AND HAVE STARTED **VALACYCLOVIR 2 DAYS PRIOR TO YOUR APPOINTMENT** (if treatment area is around your mouth). If you do not have these items, call the office immediately at 503-964-5334.

You should be 4 weeks without any sun exposure (either before or after treatment) including visiting a sunny locale. Even if you wear sunscreen daily, if you have been in the sun you will have unpredictable results and we will not treat you. We do not do any heat procedures during the warmer, sunnier weather.

### **What to Expect Before and After Nonablative Laser Resurfacing Treatment (1927nm LaseMD)**

LaseMD® Laser Treatment produces side effects. The intensity and duration of your side effects depends on the treatment aggressiveness and your individual healing characteristics. Generally, patients who are treated more aggressively experience more intense and longer lasting side effects; however, some patients who receive a less aggressive treatment may experience side effects of greater-than-expected magnitude, while others receiving more aggressive treatments may experience side effects of less-than-expected magnitude. Notify your physician if the severity of your side effects becomes a problem for you.

### **Pre-Treatment Instructions**

- Discontinue Retin-A (and/or other retinoids) or glycolic acids the day before treatment. You may resume Retin-A and other regular skin care regimens 1 week after treatment or as instructed.
- Sun Protection: Under no circumstances will the procedure be performed if you have any suntan. It is therefore very important that you wear a broad-spectrum sunscreen before and after your treatment. SPF 30 and higher is recommended.
- If cold sores are present at the time of your procedure, the session will need to be rescheduled.
- Please do not wear any makeup to your treatment session. However, it may be applied immediately after the treatment. Mineral-based makeup is recommended.
- Topical Anesthetic: Please apply numbing at least 60 minutes prior to your appointment. You may also arrive 60 minutes before treatment. We will give you anesthetic that you can apply in your car.

### **Immediately after: What you may feel and look like:**

- Immediately after the treatment, you will experience **redness, swelling** and sometimes **pinpoint bleeding**. You will notice most of the swelling on the first morning after treatment, particularly under the eyes. Swelling usually lasts two to three days. To minimize swelling do the following:
  - Apply cold compresses to the treatment area for 10 minutes of every hour on the day of treatment, until you go to bed.
  - Sleep elevated the first night. Use as many pillows as you can tolerate.
- **Heat sensation** can be intense for the following 2 ? 4 hours. Occasionally **pustules** can occur in isolated areas for a few days as well.
- Over the next few days, redness may worsen. Swelling may be significant and cause some discomfort.
- You may also notice that your skin appears bronzed or **little dark dots** will appear on the treated area. Your skin may feel dry, peel, or flake. You may notice a ?sandpaper? texture a few days after treatment. This is the treated tissue working its way out of your body as new fresh skin is regenerated.
- This dead skin is a normal result of laser treatment, and should start **sloughing** off 3 ? 4 days after the treatment. Most patients complete this process 5 ? 7 days after a treatment on the face. (On off-face areas, such as hands/arms, where healing is slower, the process may take up to 2 weeks.)
- Once the sloughing is complete, you may notice some **pinkness** over the next few weeks. Most redness resolves during the first week after treatment, but a rosy ?glow? can remain for several weeks. If you wish, you can apply makeup to minimize the redness.
- Some patients have also experienced **itching**.

### **How to Care for Your Skin After Treatment**

Congratulations! You have taken the first step toward more healthy and radiant looking skin by having a LaseMD® 1927 laser treatment. Now it is important to help your skin heal quickly and protect your skin investment.

Your after treatment skin care regimen is tailored to the treatment you received today. Follow the instructions as checked below:

- **Immediately After Treatment.** Use a bland moisturizer (i.e. Cetaphil® cream). Use of icepacks helps alleviate the heat sensation. You may also cleanse your face with a mild cleanser.
- **First Few Days.** Continue cleansing and moisturizing over the next few days. Once the sloughing starts, please allow your

skin to heal and **DO NOT** scrub, rub, or use exfoliants. Keep clothing away from treated body parts as much as possible to avoid irritation.

- **First Week of Healing.** Keep treated area clean; avoid smoking, excessive alcohol consumption, excessive exercise, perspiring, swimming, or exposing skin to heat and sun.
- **Skin Care Products.** All of your skin care products should be non-irritating and non-clogging for the first week or so after a laser treatment. Examples of brands that offer very gentle and inexpensive products that are ideal to use: Aveeno®, Dove®, Neutrogena®, Cerave®, and Cetaphil®.
- **Scrubs, Toners, Glycolic Acid, and Retin A.** Your skin will be sensitive for the first week or so after treatment. Do not use products that will cause irritation during this time. Do not use abrasive scrubs, toners, or products that contain glycolic acids or Retin A. *Read the product labels.*
- **Normal Skin Care Regimen.** Once the sloughing is complete, you may resume your routine skin care and make-up products, as long as they are tolerable to you.
- **Sunscreen.** It is very important that you use sunscreen to prevent sun damage to the skin. Sunscreen should offer broadband protection (UVA and UVB) and have a sun protection factor (SPF) of 30 or more. Once sloughing is complete, use sunscreen daily for at least 3 months after your last treatment. Apply sunscreen 20 minutes before going outside, and again, immediately before. Reapply sunscreen every 2 hours. If direct sun exposure is necessary, wear a hat and clothing that covers the treated area. Your practice of diligent sunscreen use may lower the risk of laser-induced hyperpigmentation (darker color).
- **Moisturizer.** Remember that peeling and/or flaking is normal during the healing process. Therefore, the moisturizer you use should be non-irritating and non-clogging, or else you could develop breakouts. During the healing period, your normal moisturizer may be too occlusive, so consider products from the brands listed above. Instead of using 2 separate products, use moisturizers that contain SPF30+. Reapply whenever your skin feels dry.
- **Bleaching Creams.** Discontinue use of your bleaching cream while your skin is tender.
- **Resume your normal skin care regimen when your skin has fully healed.**
- **Cold Sores.** If you have a history of cold sores, ask your doctor about care!
- **Abnormal Healing.** If you notice any blisters, cuts, bruises, crusting/scabs, areas of raw skin, ulcerations, active bleeding, increased discomfort or pain, pigment changes (lighter or darker than usual complexion), or any other problems, please contact us as soon as possible.
- **Questions/Concerns.** Post-treatment healing varies from patient to patient. If you have any questions or concerns, please contact the office.

I was instructed on the above LaseMD® laser treatment and pre and post-care instruction were given to me.
